Experiment 05

(A) A website maintains records of users who have registered on the platform and the status of confirmation requests sent to them. A confirmation request can either be successfully completed or may expire without completion.

For each registered user, calculate the confirmation rate, which is defined as:

$$\text{Confirmation Rate} = \frac{\text{Number of Successful Confirmations}}{\text{Total Confirmation Requests}}$$

If a user has never received any confirmation request, their confirmation rate should be considered **0**.

Display the user ID along with the confirmation rate rounded to **2 decimal places**. The result can be returned in any order.

Example

Suppose a user has the following confirmation records:

Action

confirmed

confirmed

timeout

Then:

Successful Confirmations = 2

Total Requests = 3

Confirmation Rate = $2 / 3 = 0.67$

```
15 );
16 INSERT INTO Signups
17 VALUES
18 (3,'2020-03-21 10:16:13'),
19 (7,'2020-01-04 13:57:59'),
20 (2,'2020-07-29 23:09:44'),
21 (6,'2020-12-09 10:39:37');

27 (3,'2021-07-14 14:00:00','timeout'),
28 (7,'2021-06-12 11:57:29','confirmed'),
29 (7,'2021-06-13 12:58:28','confirmed'),
30 (7,'2021-06-14 13:59:27','confirmed'),
31 (2,'2021-01-22 00:00:00','confirmed'),
32 (2,'2021-02-28 23:59:59','timeout');
33
34
35 select s.user_id, round(avg(case when c.action='confirmed' then 1 else 0 end),2) as confirmation_rate from Signups s
36 left join Confirmations c
37 on s.user_id=c.user_id
38 group by s.user_id
39 order by confirmation_rate desc
```

	user_id [PK] integer 	confirmation_rate numeric 
1	7	1.00
2	2	0.50
3	6	0.00
4	3	0.00

Experiment 05

(B) Problem Statement

A ride-booking company maintains information about trip requests and the users involved in those trips. Some users may be restricted from using the platform, while others are active participants. Each trip can either be completed successfully or cancelled by one of the participants.

For each day between **2013-10-01** and **2013-10-03**, determine the proportion of cancelled trips among all valid trips. A trip should be considered valid only when both the customer and the driver associated with that trip are active users. The final result should display the date and the calculated cancellation rate rounded to two decimal places.

We need to calculate:

But only consider trips where:

Date between

Cancellation Rate

Client is NOT banned

and

2013-10-01

=

AND

And

Driver is NOT banned

2013-10-03

Cancelled Trips

Total Valid Trips
